Introduction to Computer Applications

Applied Mathematics

## Projects

### Visitor Tracking System

Track Visitors in Real Time.

VTS is highly sophisticated system design to monitor and manage the flow of visitors. A picture of visitor is taken at entrance and used to track their movement. If a visitor go to unauthorized area an alert is immediately generated. For high level of accuracy Python(deepface, pandas, cnn, cv2, imutils, flask) is used as backend and React Native to design Frontend.

React Native Python

### airforce.com

Design of website using html/css

The U.S. Air Force website is a dynamic and interactive platform created using CSS, HTML, JavaScript, and jQuery. It offers a visually appealing design, structured content, and engaging features to provide information about the Air Force's mission, career opportunities, news, and events. JavaScript and jQuery add interactivity and functionality, enhancing the user experience with dynamic elements and seamless data retrieval. The website showcases the Air Force's commitment to excellence and highlights the available opportunities for individuals interested in joining.

HTML/CSS JavaScript/ jQuery

## Skills

### React Native

JavaScript Java
