PROJECTS

AI CIBERCHAT- FYP Project

2023–2024

AI CiberChat is a large language model based on the GPT-3 architecture. Trained on a massive corpus of text, it is designed to generate human-like responses to natural language inputs. It can perform a wide range of language tasks such as language translation, summarization, question-answering, and conversation. AI CiberChat has been optimized to provide accurate and coherent responses, and it continues to improve through ongoing updates and training. Its advanced natural language processing capabilities make it a powerful tool for various applications, from chatbots to customer service to language learning.

Technologies: HTML, CSS, and JavaScript, React Js, MongoDB, Python

SKILLS
